#### **Housing market**

2 0 2 3

In 2023, the real estate market surprised with its stability and resilience. External factors and macroeconomic indicators predicted a market crash. We got through it with market silencing. The drop in supply was offset by limited supply and a categorical reluctance of sellers to accept a new - significantly lower - market price level. As long as unemployment rates are as stable as they are today, there is no reason to expect a significant reduction in property prices. Conversely, if we see a sharp rise in unemployment, lower market prices will be around a year away.

# HOUSING MARKET INDICATORS AND TRENDS

# A BUYERS' MARKET AND A GROWING INTEREST IN RENTAL HOUSING

In 2023, overall housing market activity has been fairly uniform. There are strong buyers' market characteristics - increasing number of sales advertisements, longer decision-making without rushing into a transaction, and sellers being more accommodating to buyers by agreeing to reduce the sales price. Whereas 45% of sellers were asking a price out of line with the market situation in the summer, in September it was only 25%, with the share remaining in the 20-25% range until the end of the year.

Last year, buyers who were able to do the deal on their own account were in a particularly advantageous position. In the first half of the year, the high EURIBOR reduced the ability to buy a property with a mortgage, so the most active transactions were for properties priced between EUR 40 000 and EUR 60 000.

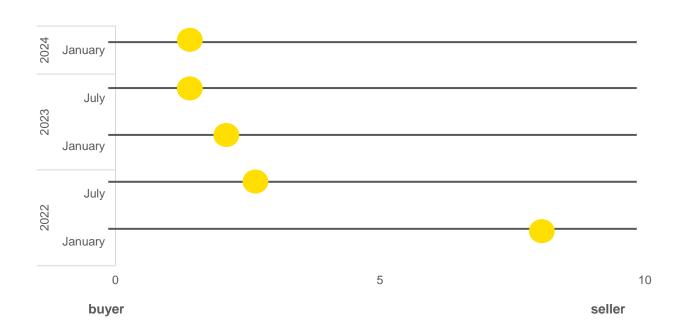

The increase in monthly loan payments also triggered another trend: the rental market activity increased significantly. In most cases, rental payments were significantly lower compared to potential loan payments. For example, in December, renting a two-bedroom apartment in a new project in the most sought-after neighbourhoods of Riga was 11% cheaper than buying.

The year ended on a positive note: EURIBOR was not increased, property can be sold slightly faster and the government has decided to support borrowers.

#### **APARTMENT MARKET IN LATVIA**

Total number of transactions recorded and sum of transactions

<sup>\*</sup> Data will be updated after registration of several transactions in the Land Register in the following period

The majority of apartment transactions occurred in Riga and its surrounding agglomeration, comprising over half of the total number of transactions. With market activity dampened by elevated EURIBOR rates and property prices, the number of registered transactions has also dwindled compared to 2022.

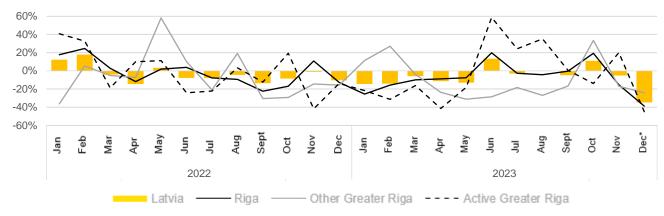

Buyers mostly prefer modern, well-maintained and ready-to-occupy dwellings in energy-efficient buildings and new projects. However, financial considerations also prompt them to explore the secondary market supply. For example, in the centre of Riga, early in the year, the average price difference between apartments in historical buildings and renovated houses was as high as 20-30%. As a result, older buildings were the most preferred ones by buyers, raising concerns about the technical condition of the houses. However, when a quality property at a fair price became available on the market, buyers were quickly found both in Riga and in the regions.

At the start of the year, about one-third of transactions were conducted using buyers' funds, with 69% of properties financed through loans. As the year drew to a close, the ratio had already tipped towards a split of 40% and 60%. With the rental market picking up speed, a large number of properties purchased without a mortgage (including low- quality ones) have been renovated and offered for rent by new owners.

# FOR SALE AND LONG-TERM RENT CLASSIFIED ADS IN LATVIAN CITIES

Number of for-sale ads depending on the number of rooms

**■**1 **■**2 **■**3 **■**4+

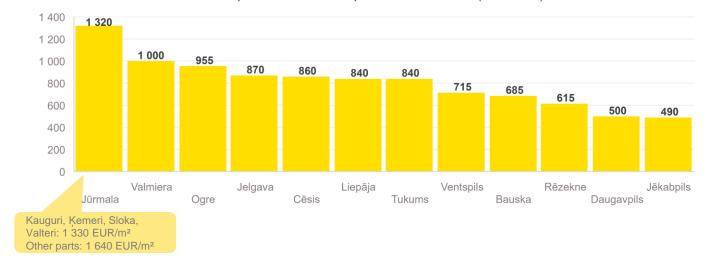

In 2023, both the number of advertisements for apartments for sale and those for rent in Latvia exhibited a consistent rise, reaching the record levels witnessed a decade ago.

The peak availability of apartments for purchase in Riga occurred in September, with a total of 4,730 listings on offer. In September, new projects comprised roughly one-third, or 1,290 apartments, while series-type buildings accounted for nearly half of the total number of listed apartments. The remainder includes new projects on the secondary market as well as housing in historical buildings.

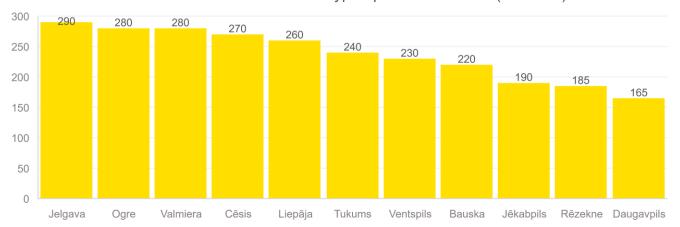

The rental market also peaked in September with more than 3,000 apartments, of which almost 40% were in series-type buildings. The significant surge in the availability of rental apartments, skyrocketing from 1,210 in January to nearly tripling that figure by autumn, can be attributed to sellers transitioning their sales listings to the rental market. This shift is driven by a reluctance to decrease property prices and a desire to guarantee bills are covered during the winter season. A considerable portion of rental apartments were owned by families living abroad who spent only the summer months in Latvia. Towards the end of the year, the supply in both segments experienced a slight decline but continued to maintain a high level.

# FOR SALE AND LONG-TERM RENT CLASSIFIED ADS IN LATVIAN CITIES

# NUMBER OF APARTMENT TRANSACTIONS IN RIGA

#### Change in the number of transactions\*\*

<sup>\*</sup> December 2023 data available partly

In the apartment segment, only June and October saw a positive trend in terms of transaction numbers. The surge in autumn transactions can be attributed to the abundance of sales advertisements in September, coupled with the return to the usual pace of life following the summer holiday season.

Overall, transaction activity in Riga experienced a decline compared to 2022. On average, about 700 transactions involving apartment properties were finalized per month, reflecting a 20% decrease compared to recent years' averages. Roughly half of these transactions consist of apartments in series-type buildings in Riga's neighbourhoods, while 25-30% are attributed to housing in new projects. Despite the decrease in transaction volume, experts at Latio believe that the current situation serves to mitigate disparities compared to previous trends in the housing market's evolution.

The number of transactions also decreased due to high loan payments, which shifted activity to the rental market, as well as sellers' refusal to adjust prices. At the end of the year, however, property prices in certain segments declined slightly, encouraging transaction activity in early 2024.

A novel trend, previously unobserved, involves the sale of larger properties acquired or constructed during marriage, with individuals now opting to purchase or rent smaller residences. This phenomenon introduces a paradox: despite a declining population, the number of households continues to rise.

Number of first-time sales in new projects (the rest of Riga)

#### **NEW PROJECTS SEGMENT**

Average prices EUR/m2 in new projects on the primary market, Riga

In 2023, there was a steady and incremental rise in the availability of housing within new projects. In January, 1,400 apartments were on offer for purchase, while by year's end, the number had climbed to 2,095. About half, or 1,135, of the residences available in December were part of the primary market for new projects.

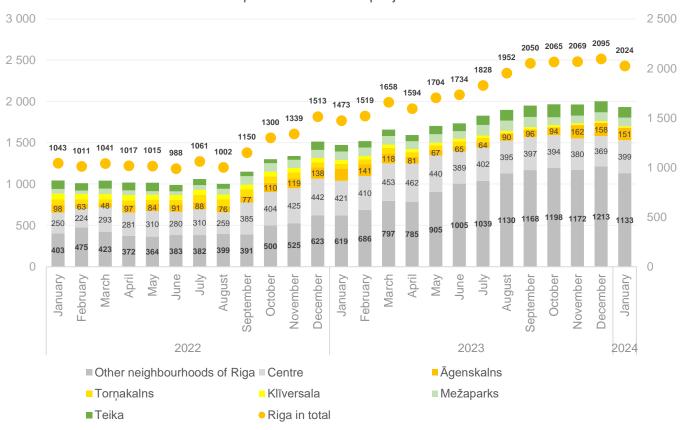

In December, the supply of brand-new apartments decreased by 14% compared to November. Developers typically launch promotions towards the year's end, enticing potential buyers with various bonuses like inclusive parking spaces or storage units, often crucial in their decision-making process when choosing among similar properties. Additionally, a notable proportion of apartments have entered the rental market.

By the year's end, the advertised price for new projects in Riga's primary market stood at 2980 EUR/ sq.m, while actual transaction prices averaged 2640 EUR/ sq.m. The disparity in prices indicates a slight increase in seller flexibility. Consequently, there has been a slight reduction in the number of days required to sell a property in December, along with a decrease in the percentage of sellers asking prices that deviate significantly from the market situation.

The majority of transactions in new projects last year involved developments that were either completed, in the occupancy approval process, or nearing completion, while reservations for apartments to be completed within 1-2 years were infrequent.

#### **NEW PROJECT SEGMENT**

Number of available apartments in new projects at the end of the month

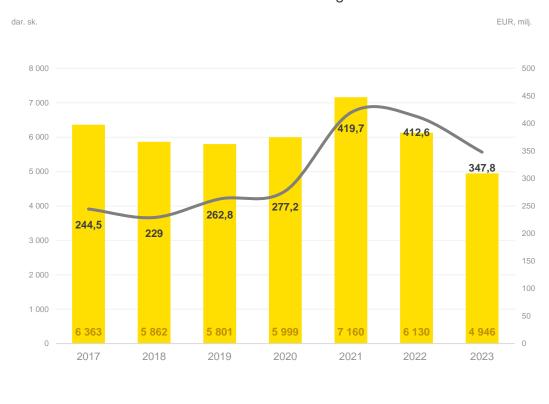

#### **PRIVATE HOUSES**

Number of transactions (left axis)

#### Number of transactions and gross values

Gross transaction value, mln. (right axis)

In 2023, interest in detached houses among buyers was high, but the lack of adequate supply and the change in banks' lending conditions due to the high EURIBOR have significantly reduced the overall number of transactions.

The most sought-after properties in this segment were pre-built, cost-effective detached houses spanning up to 100 sq.m, along with newly constructed homes. However, the availability of such properties was at its lowest last year. Instead, the majority of listings comprised expansive detached houses priced above EUR 200,000. In August, supply shrank to unprecedented lows and consisted mostly of large and expensive detached houses, which sellers tried to take advantage of by keeping prices unreasonably high. There is hardly any demand both in Riga and the surrounding areas, and in the regions such as Vidzeme and Zemgale. During the autumn season, the overall supply of private houses in Latvia began to rise, eventually reaching a level that was 30% higher than in the third quarter of 2022.

One of the areas with the highest supply of private houses was Jurmala; however, demand in such properties remained low primarily due to their elevated prices. Sellers in Jurmala were hesitant to reduce prices, only considering them when a genuine buyer expressed interest in a property. As the year progressed, market supply dwindled due to seasonal factors and hasty sale announcements.

Overall, despite the short-term volatility, the residential segment hallmarks remained unchanged. The primary considerations for buyers remain cost-effectiveness, energy efficiency, and, of course, functionality.

#### RESIDENTAL DEVELOPMENT LAND

Changes in the number, value and area of transactions compared to the previous year

<sup>\*</sup> Undeveloped private land.

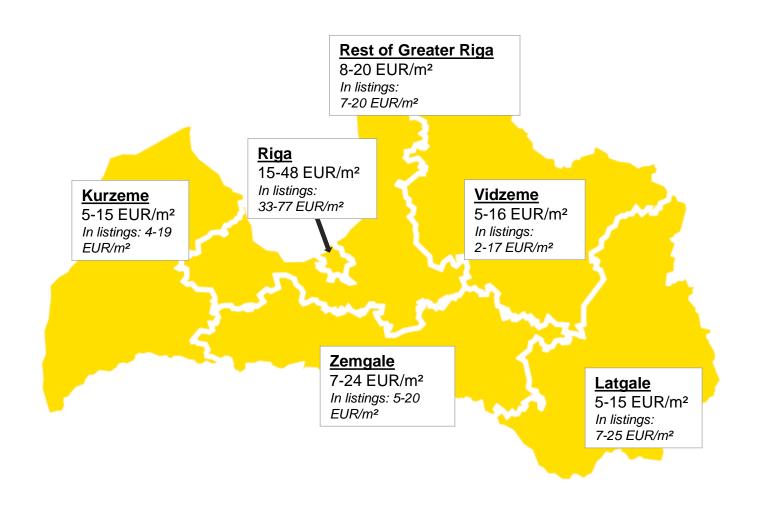

The calculations were based on land transactions of 500-4000 m2 in Riga and Jurmala and 500-11000 m2 in other areas

The residential development land segment remained relatively quiet last year. Early in the year, the shortage of mid-range private houses prompted buyers to consider purchasing land for self-development, but the majority of quality plots with established utilities and clear title deeds in desirable locations had already been sold.

In 2023, the residential land sector saw its highest activity within the Riga Agglomeration, although transaction rates were nearly 30% lower compared to the previous year. In the realm of residential development land, one of the primary factors hindering activity was the reluctance of sellers to lower their high asking prices.

At the end of the year, both sellers and buyers, somewhat resigned to the current market situation, demonstrated some renewed interest in private houses. Sellers began advertising their properties at prices more aligned with the market trends, while buyers increasingly acknowledged the realities of pricing. The activity was mainly driven by local entrepreneurs and developers who displayed readiness to explore investment opportunities, However, foreign investors remained hesitant due to uncertainties surrounding legislation, geopolitical factors, and constraints of fund control.

«In Zemgale in 2023, a noticeable trend emerged with sellers initially listing properties at excessively high prices, resulting in minimal interest from potential buyers. Subsequent adjustments following market research and consultation with valuers led to price reductions, prompting immediate interest from buyers.

This year, the population of Zemgale region has shown a preference for compact dwellings featuring modern finishes and furnishing. Interest in properties with Soviet-era interiors and those priced above EUR 200 000 has sharply fallen. Like elsewhere, individuals prefer housing that necessitates minimal additional investment, such as apartments in renovated buildings. There is also a notable demand in smaller homes 50 - 120 m<sup>2</sup> large, at a maximum price of EUR 140,000.

What is notable is the decrease in demand for apartments in new projects. While they were previously highly sought after, there hasn't been a single apartment sold in the new project in Ozolnieki, despite active marketing efforts over the past four months. Although transactions still fall within a similar price range as they did a year ago, the price drop between the advertised and sale prices is not as significant. This difficulty in selling is contributing to the growth of the rental market, with many apartments being leased on an annual basis and left unfurnished.

Residential development land is also experiencing subdued demand in Zemgale. For instance, the Jelgava-based company Novaturs, specializing in this sector, is resorting to leasing land plots for up to 2 years in order to facilitate the sale of its properties. While construction activities are ongoing in various residential areas of Jelgava, the pace is not as brisk as it was approximately 2 years ago. Private houses are predominantly being constructed for personal use rather than for sale.

Overall, the market in Zemgale region shows a balance in the confidence of buyers and sellers. There is no pronounced tipping of the scales in both ways. A large part of the properties for sale in Zemgale are at relatively low prices up to around EUR 30 000-40 000, so buyers often engage in transactions using their personal funds. Most of the time, everyone who applies for a bank loan gets one. Buyers have actively started to use the small home loan for property purchases, which is granted up to EUR 20 000. Such a loan can ease the financial burden on the buyer, as there is no need to mortgage the property and there are no costs for an appraisal.

In 2024, we anticipate the market to stabilize further, with continued activity. We foresee transactions being meticulously considered and conducted at realistic market prices."

~ 1 980

- 13 %

Source: Cenu Banka

\* All transactions in apartments and private houses from January to December 2023

«In Vidzeme in 2023, buyers preferred to purchase completed housing that did not require additional investments and expected a price decrease, which was only partially justified in some segments in the range of 3-4%. When putting a property up for sale, owners looked for a similarly priced property in Riga or the Greater Riga Area or used the proceeds as a down payment for the construction or purchase of a larger home. Due to the drop in prices expected by buyers, sellers had to be prepared to budge by around 10-12% of the original asking price.

Compared to 2022, the supply was much higher, but the number of transactions does not reflect this. It is very similar to the number of transactions in 2022, but comparing both years against 2021, there is a noticeable drop of around 15-20%, which is due to the high interest rates of the banks and the consequent reluctance of buyers to conclude transactions.

A large number of Soviet-era apartments came on the market, while there was a noticeable shortage of new projects in the region. There are only around 20 new projects and virtually no newly built houses. Due to the high construction costs, building a property requires a lot of money, but despite this, construction is active. There was a strong supply of spacious, beautiful, quality properties outside the cities. Such transactions were mostly implemented when the buyer already had most of the funds.

The seller definitely felt safer in 2023 because he/she had the property. The buyer is in a much more precarious position if bank financing is required. However, for sellers, the feeling of insecurity comes from a possible fall in prices in the future.

In 2024, we expect positive developments in the global situation, in Ukraine, in the banking sector. For the government to be active, we support the entry of new investments in the real estate sector.

Be that as it may, there has always been a movement of people - from larger to smaller homes in old age, from smaller to larger ones in young age. Someone holds on to family roots and family oaks, tries to restore and cherish them. Someone sees a huge business opportunity to live well in their land and country. May we live well!»

«Sellers are charging disproportionately high above-market prices for properties, so they end up for sale repeatedly and wait a long time for a buyer.

In the apartment segment, historical buildings were in high demand thanks to their high ceilings and comfortable layouts, with unrenovated apartments reaching up to 1,000 EUR/sq.m. New projects appeared on the market less frequently and took longer to sell, as the price of 2,000 EUR/sq.m was too high for many. The demand and price for units dating back to the Soviet period varied depending on the district, as, for example, in Liepaja price categories differ greatly. There was a clear trend towards paying more for apartments in renovated buildings and with heat meters. Liepaja has a large number of wooden apartment buildings where prices range from 150 to 1,000 EUR/m2 depending on the technical condition.

In the private housing segment, there was a shortage in the largest cities of Kurzeme. Their price is determined by what the buyer is willing to pay and what the seller is willing to sell for. For example, in Liepaja, a 100 square metre non-renovated house is priced at around 1,000 EUR/sq.m, while a renovated or new house costs 1,500 – 1,800 EUR/sq.m. The price is lower for houses spanning over 200 square metres. Wooden detached houses are also in demand.

Transactions with residential development land in Kurzeme are rather slow, yet when they do take place, the price is high. Sometimes the price for a 600 square metre plot reaches EUR 40 000+ depending on the location. Many choose plots near the Liepāja border because the price is lower. Agricultural land transactions were mostly carried out by large farmers with various types of support, but the location of the plot was the pivotal factor influencing the transaction value. The closer to the farmer's complex, the more the farmer was willing to pay. The seaside plots attract those who desire to build a cottage where they can get away from the hustle and bustle of the cities at weekends. Prices for such plots are also the result of cooperation between buyer and seller. There are also plots by the sea that have not yet been sold because the asking price is too ambitious.

A clear trend in Liepaja, Ventspils and Kuldīga in 2023 is short-term seasonal rentals. Airbnb and Booking offer many properties which are very actively rented in the warm season of the year. In the off-season, they are rented for 7 or 8 months or sit empty because the owner has managed to earn enough for the whole year and more during the high season.»

«In Latgale, in the first half of 2023, the die was cast on the side of the sellers. Demand was active, and prices were appropriate. In the second half of the year, buyers' expectations were met. A lot of properties at bargain prices appeared on the market, which is explained by the decision of Russian passport holders to leave Latvia and thus sell their property in Daugavpils as soon as possible at a cheaper price. In addition, the City Council started to dispose of illiquid properties, which led to lower prices for non-renovated properties, e.g. in residential areas a 2-room apartment could be bought for as low as EUR 13 000-15 000.

Compared to 2022, in 2023 Daugavpils saw a noticeable investor activity in the market of commercial real estate, for example, in August a building belonging to the Ministry of Finance, two industrial units were sold at auction for prices between EUR 300 000-500 000. August also saw the most expensive transaction in Daugavpils - a functioning shopping centre for EUR 3 300 000.

Like in other regions, in Latgale, especially in Rezekne, there was an increased demand for renovated properties that did not require additional investments. Accordingly, properties in poorer visual conditions experienced a decrease in prices. Apartments on the top floors of buildings without a lift but in good technical condition can only be sold for around 20-30% less, but there is no interest from buyers at market price. There is a shortage of modern private houses completed after 2000 on the market. The supply of such houses is not keeping up with demand. Prices were reduced for detached houses built in the 1960s. While a year ago, old wooden/brick houses (60-80 sqm) were selling for EUR 40 000-55 000, prices have now dropped to EUR 30 000-38 000.

In the residential development land segment, it seems that in 2023 the completion of construction started in previous years was accelerated, but new construction was slow and demand for residential development land also decreased.

In Latgale, the majority of transactions were carried out with buyers' personal funds or on the instalment basis, as loans are always considered and granted cautiously in this region. The rising interest rate also harmed buyer activity.»

The year 2023 will go down in history for the notable surge in EURIBOR rates, greatly affecting the entire real estate sector, from developers to consumers. In this regulatory review, we will delve into the developments expected to bring changes to consumer mortgage lending. Stay tuned for insights on these developments in the upcoming 2024 Market Reports.

# CHANGES IN LEGISLATION RELATED TO THE REAL ESTATE SECTOR

#### AMENDMENTS TO CONSUMER LAW

On 1 January 2024, amendments to the Consumer Rights Protection Act enter into force, introducing a mortgage borrower protection levy.

The fee for loans granted to consumers (physical persons) secured by a mortgage on real estate in Latvia will be paid by credit institutions registered in Latvia, as well as by capital companies that have received a special licence from the Consumer Rights Protection Centre (PTAC) to provide consumer lending services (according to PTAC data as of 30.06.2023, 8 capital companies have granted 314 new mortgage loans of EUR 6 124 480 in the first half of this year).

The levy is applicable for the year 2024, will be payable quarterly and will be set quarterly at 0.5% of the levy payer's total outstanding mortgage loan balances as at 31.10.2023.

The levy payer shall submit to the State Revenue Service, for each quarter of the year, no later than 20 January, 20 April, 20 July and 20 October, a declaration indicating the number of mortgage loans granted and the amount of their balances as at 31.10.2023 on which the 0.5% levy is calculated and the total amount of the levy.

The amount of the levy shall be paid by the levy payer into the State budget by 23 January, 23 April, 23 July and 23 October 2024.

The levy will be administered by the State Revenue Service.

The levy payer shall calculate and notify to the National Revenue Service by 10 April, 10 July, 10 October and 10 January 2024 and 10 January 2025, for each eligible mortgage borrower, the interest compensation calculated on the loan at 30% of the quarterly interest payments, but not more than two percentage points of the total borrowing rate for the period (excluding fixed interest rate).

The interest rebate is applicable to mortgage borrowers if both conditions are met:

- 1) The mortgage loan contract is concluded until 31.10.2023;
- 2) The mortgage loan balance does not exceed EUR 250'000.

The National Revenue Service will make quarterly payments of the levy payer's interest compensation to the mortgagee's payment account until 30 April, 30 July, 30 October and 30 January 2024 and 30 January 2025.

# CHANGES IN LEGISLATION RELATED TO THE REAL ESTATE SECTOR

#### AMENDMENTS TO CONSUMER LAW

Following the adoption of the above-mentioned amendments to the Law on Consumer Rights Protection by the Saeima, on 14 December 2023 the Cabinet of Ministers submitted to the Saeima other **amendments to the Law on Consumer Rights Protection**, which will be considered together with amendments to the Law on Notaries, the Law on Credit Institutions and the Law on Insurance Contract.

These amendments have been promoted by the Ministry of Economy and aim to simplify the process of re-crediting mortgage loans granted to consumers and to abolish the ban on advertising for mortgage loans.

The annotation to the draft law states that the draft law is designed to reduce obstacles to re-crediting and to make it easier for consumers to re-credit mortgage loans, by promoting competition between credit providers and reducing mortgage lending rates. Currently, credit institutions charge a fee not only when granting loans, but also when a borrower remortgages with another creditor, which, together with land registry and notary fees, can result in remortgaging costs of 2-5% of the outstanding amount of the loan.

The draft law provides for a simplified transition for the consumer from the previous creditor to another, acquiring creditor, including the provision that the previous creditor is not entitled to charge a fee for the mortgage remortgage if the mortgage credit agreement or pledge agreement so provides and is not entitled to charge the consumer for any expenses incurred in connection with the mortgage remortgage, except in the case of a fixed borrowing rate.

The draft law also provides that, in the process of mortgage remortgaging, the fee for drawing up or granting a new mortgage credit agreement shall not exceed 1% of the amount of the new mortgage credit. The amount of such compensation may not be higher than the fee charged by the acquiring creditor at the time for the granting of new mortgage loans. The consumer shall have the right to divide this compensation into three instalments.

The draft law provides that in the case of mortgage remortgaging, the acquiring creditor is not obliged to comply with the ratio of the loan amount to the market value of the immovable property laid down in the Consumer Protection Act and to reassess the collateral (immovable property) relating to the mortgage loan, provided that the transaction meets the criteria defined by the acquiring creditor as regards the amount of the loan, the loan to collateral ratio and the availability of reliable information on the value of the collateral from external sources.
